

Project Scope Statement

ShopEase LK — Trusted Online Grocery & General Commerce Platform

Document type	Version	Date	Prepared by
Project Scope	v1.0	May 2026	R.M.T.D.Rathnayake

1.Executive summery

ShopEase LK is a proposed e-commerce platform designed to address the low online shopping adoption rate in Sri Lanka. Despite growing internet penetration, most Sri Lankans continue to shop physically due to three root causes: lack of trust in product quality, high and unreliable delivery costs, and limited support for cash payments. This project scope defines the boundaries, objectives, stakeholders, constraints, and success criteria for the ShopEase LK.

2. Problem Statement

Current situation (as-is):

- Most Sri Lankan consumers purchase daily groceries and general goods from physical stores.
- Existing e-commerce platforms do not adequately address trust, delivery cost, or cash payment needs.
- Busy professionals, rural residents, and price-sensitive households are underserved by current online options.

Desired situation (to-be):

- A platform where consumers can order groceries and general products online with confidence in quality.
- Flexible delivery options: urgent courier (PickMe/Uber), scheduled ShopEase delivery, or low-cost pickup points.
- Cash-on-delivery available on all delivery methods to build trust with non-card users.

3. Project Objectives

- Enable customers to browse, search, and purchase general products and groceries online 24/7.
- Build trust through a seller verification and product quality rating system.
- Reduce delivery cost barriers via a pickup-point network and bulk-route scheduled delivery.
- Integrate PickMe/Uber API for urgent same-day delivery in urban areas.
- Support cash-on-delivery (COD) across all delivery methods.
- Launch a functional web-based MVP within 6 months.

4. Scope Boundaries

4.1 In Scope

Category	Features included
User management	Customer registration, login, profile, address book
Product catalog	Browse, search, filter, product detail pages, photo/video reviews
Seller management	Seller registration, verification badges, product listing, inventory
Shopping & checkout	Cart, wishlist, order placement, promo codes
Delivery system	PickMe/Uber API (urgent), ShopEase delivery (standard), pickup points (economy)
Payment	Card payment gateway (LKR), cash-on-delivery for all delivery methods

Order management	Real-time order tracking, delivery notifications, order history
Admin panel	Seller approval, order oversight, platform analytics, dispute resolution

4.2 Out of Scope (Phase 1)

- Mobile application (iOS / Android) — planned for Phase 2.
- AI-powered product recommendations.
- Multi-language support (Sinhala, Tamil) — Phase 2.
- Auction or bidding functionality.
- Subscription grocery basket — Phase 2.
- Live customer chat support.

5. Delivery Business model Rules

The following business rules govern how delivery options are presented to the customer:

- Rule 1: If customer selects 'Urgent', AND is within PickMe/Uber coverage area, show PickMe and Uber as primary options with live ETA and fee from their API.
- Rule 2: If customer selects 'Urgent' but is outside courier coverage, show ShopEase delivery and pickup points only, with an explanatory message.
- Rule 3: If customer selects 'Standard' and order value exceeds Rs 3,000, ShopEase delivery is offered free of charge.
- Rule 4: Pickup point option is always shown to all customers regardless of urgency or order value.
- Rule 5: Cash-on-delivery must be available on all three delivery methods.

6. Constrains

Type	Description
Time	MVP must be delivered within 6 months of project initiation.
Budget	Platform development funded from initial startup investment round only.
Technology	Web platform only. Payment gateway must support LKR currency.
Legal	Must comply with Sri Lanka consumer protection and data privacy regulations.
Delivery	PickMe/Uber partnership subject to API agreement and coverage zone limitations.

7. Assumptions

- Sellers will self-register through an online portal; initial verification will be manual by the admin team.
- Customers have basic internet access and a valid email address.
- Third-party payment APIs will be used; no in-house payment processing is built.
- Last-mile delivery in Colombo, Kandy, and Galle will be handled via PickMe/Uber API.
- Pickup points will be established through commercial agreements with local pharmacies and superettes.

- Delivery to rural areas will rely on the pickup-point network or scheduled ShopEase bulk routes.

8. Key Risks

Risk	Level	Mitigation
Low seller adoption at launch	High	Early onboarding incentives; guided seller setup wizard
PickMe/Uber API integration delays	High	Begin API negotiation in Month 1; fallback to ShopEase-only delivery
Customer trust in online quality	High	Seller verification badges, photo reviews, easy return policy
Payment gateway downtime	Medium	Integrate secondary payment provider as backup
Scope creep from stakeholders	Medium	Formal change control process; BRD sign-off required
Pickup point partner withdrawal	Low	Minimum 3-month contract; maintain list of backup partners

9. Success criteria

- 100+ active verified product listings at go-live.
- Checkout completion rate above 70% in first month.
- Average page load time under 3 seconds.
- Zero critical security vulnerabilities at launch.
- Customer satisfaction score (CSAT) above 4.0 / 5.0 in the first 30 days.
- At least 10 pickup point locations operational at launch.
- PickMe/Uber delivery available in Colombo district at launch.
